INNOVATIVE DOOR HARDWARE SOLUTIONS

## NUMERALS

TESTING

# Introduction

Prided on product excellence and innovation; UAP Limited, have an unrivalled reputation for the products we supply and the service we provide.

As a company we work with industry leading, highly respected manufacturers, importing the very best goods from around the globe.

We take care of our customers by providing solutions to ANY door hardware requirements. This includes sophisticated door and window security solutions and attractive decorative furnishings; both for commercial and domestic needs.

At UAP we are constantly striving to improve on the products we already supply as well as develop new, pioneering ranges and practical product solutions.

With an in house testing centre and product developer, each stage of the development process is thorough, from the initial design right down to the final product.

In house 3D printing technology allows for further and more precise advancement of our products which are then expertly manufactured and put through stringent testing conditions using in house test equipment – ensuring all products are designed to the highest standards.

### Salt Spray Testing Machine

This machine tests the corrosion resistance of the door numbers. The salt spray cabinet produces a corrosive environment, by releasing a dense saline fog into the chamber which the door numbers are exposed to. This creates an accelerated corrosion of the door numbers and allows us to test how well the handle would stand up in harsher environments.

The door numbers are tested for differing lengths of time depending on the standard requirements; 480 hours for brass, zamak and aluminium based numbers where we offer a 5 year inland coating guarantee, and in the case of stainless steel Nanocoast door numbers, we test for 2000 hours where we offer a LIFETIME coating guarantee anywhere in the country, as the products will not pit or rust.

### Self-Adhesive Test

Used on self-adhesive door numbers, the self-adhesive test tests the strength of the self-adhesive tape which attaches the knocker to the door.

Self-adhesive numbers promise to stick to a door using industrial closed cell tape which once set is extremely strong. This test ensures the reliability of the strength of the tape and works by fitting the numbers and hanging a weight from the bottom which weighs around half a kilogram. This is done for 2,000 hours and ensures the self-adhesive properties will continue to work even with added pressure applied.

### All Weather Testing Machine

When placed in the all-weather machine, the door numbers are subjected to conditions including high UV exposure using a Xenon Arc Lamp which will accelerate UV degradation and measure how well a number can last in extreme conditions.

Other conditions such as rain and extreme heat can be generated by the machine to expose door numbers to all kinds of environments. This allows us to continually improve the door numbers and make them so they last longer in all kinds of different environments.

### UV Sunlight Test

Used to test the colourfast of anodised door numbers, the UV machine measures the stamina of the door number finish, testing how quickly it will fade in sunlight. It does this using UV lights which the numbers are left under for 2000 hours.

No one wants a number that will quickly fade when exposed to sunlight, and this machine ensures our door numbers can withstand these effects and will look good for longer. We offer a 10 year colour fast guarantee on the anodised door numbers.

## Brands

UAP is one of the most widely recognised door hardware brands in the industry. The UAP brand consists of door knockers, door viewers, letterplates, door and window handles, numbers and letters, door locks, euro cylinders, mortice locks, window security and door security products. Every product is innovatively designed and constantly developed to ensure every product is of the highest quality and meets every customer's requirements.

More information can be found at [www.uapcorporate.com](http://www.uapcorporate.com)

MAX6MUM SECURITY is a range of door hardware and security products aimed for at the retail market. The range consists of blister packed high quality architecturally specified and low cost products than anyone can install to improve home security. MAX6 is fully backed by a huge marketing campaign featuring our brand mascot 'Max' which is perfect for any trade counter or hardware shop.

More information can be found at [www.max6.co.uk](http://www.max6.co.uk)

Tradelocks is one of the largest locksmith brands in the UK, providing locksmith tools to gain entry to a number of different domestic locks, cars and safes. Tradelocks supplies domestic locksmiths, auto locksmiths and safe locksmiths, as well as a number of auto recovery companies and government agencies.

More information can be found at [www.tradelocks.co.uk](http://www.tradelocks.co.uk)

Genuine Lishi is one of the most recognised and trusted vehicle opening tool brands in the World. Genuine Lishi is supplied and distributed to over 80 countries, and is highly sought after due to its high quality and innovative products, including the brand new NightVision 3 in 1 picks and decoders.

### 48 Hour Delivery Policy\*

Our 48 hour delivery promise is targeted on all stocked products.

### 5 Year Product Guarantee

All products inside this brochure come with up to a 5 year guarantee except the Nanocoast® range which is a lifetime coating guarantee.

### Salt Spray Testing

All of our door handles in this catalogue have been salt spray tested to ASTM B117 for 480 hours, apart from the Nanocoast® range which has been salt spray tested for 2,000 hours.

### Anodised Coatings

The anodised coating used on our Aluminium door handles conform to ISO 7599 AA15 and comes with a 10 year colour fastness guarantee.

### Guarantee

The guarantees mentioned in this brochure are for guidance only and unless otherwise stated, only relates to products being used in inland areas which are defined as 25 miles from the coast, or 5 miles from highly polluted industrial areas. Please ask your UAP account manager for copies of the guarantee wording covering your product of interest and please talk to your account manager about any specific application you might have.

\*48 hours means 2 working days. Product colours may vary slightly from the actual photograph.

Our Nanocoast<sup>®</sup> range of products are specifically designed for areas which are within a 25 mile radius of the coast, or within 5 miles of highly populated industrial areas. Made from 304 grade stainless steel, each product in the range has been salt spray tested to ASTM B117 for 2,000 hours, and comes with an industry first LIFETIME coating guarantee, as the products will not pit, rust or corrode no matter what environments you put them in!

#### Why Have We Used 304 Grade Stainless Steel?

We believe 304 grade stainless steel is the perfect grade of stainless steel to use at the coast for the cost price versus performance of the products. 304 grade is an austenitic stainless steel, containing 18% chromium and 8% nickel, and also a low carbon content. Due to this it has an excellent corrosion resistance in a wide variety of environments, and has good resistance to oxidation.

Downgrading the stainless steel quality to a 200 series grade stainless steel, means that even though they have similar mechanical and physical properties to the 304 grade, there is decreased nickel content. The nickel is replaced by manganese which results in weak corrosion resistance, and high carbon content leaves the stainless steel susceptible to stress corrosion cracking. Upgrading to 316 grade stainless steel is a lot more expensive than 304 grade stainless steel, which will dramatically put up the price of products, and only slightly increases the corrosion resistance as it contains 18% chromium and 10% nickel. However it shares similar characteristics to 304 grade stainless steel in resistance to oxidation and durability. 316 grade is usually used when you need a higher resistance to solutions such as sulfuric acid and chlorides at high temperatures.

#### Features and Benefits

- All products made from 304 grade stainless steel
- Salt spray tested to ASTM B117:2005 for 2,000 hours
- LIFETIME coating guarantee ANYWHERE in the country
- Doesn't rust or pit at the coast
- Huge range of suited and colour matched products
- Available in 3 finishes:
  - Mirror Polished, PVD Gold and Satin Stainless
- Competitively priced

## Self-Adhesive Numerals

The self-adhesive Times Roman font front door numbers and letters easy to fit and long lasting. With no skill or tools required to attach the numeral to the door, they can be fitted to any door or wall surface. Each digit is secured to the door using an industrial closed cell tape which is watertight, stopping water getting behind the digit to prevent rusting.
